**ASX Announcement** My Net Fone Limited (ASX:MNF)

Sydney – 12<sup>th</sup> March 2013 For Immediate Release

## MyNetFone Gains Accreditation as Supplier of **Choice for Queensland Government**

## ~ Accreditation further solidifies MyNetFone's position in the Enterprise & Government sector ~

My Net Fone Limited (ASX:MNF), the leading provider of hosted voice and data communications services, is pleased to announce that it has been accredited by the Queensland Government Chief Procurement Office as an approved supplier under the Government Information Technology Contracting (GITC) Framework.

This accreditation is the result of a rigorous approval process, where MyNetFone demonstrated its ability to provide reliable, feature-rich telephony services. MyNetFone's Enterprise voice solutions provide a fully featured and cost-effective service with seamless transition from legacy systems to high quality, high-speed services that can deliver significant benefits to government departments and their staff.

Building upon MyNetFone's recent acquisitions in the wholesale voice and data services arena, coupled with the company's earlier success of a \$20 million contract win to supply the Tasmanian Government with Voice over IP (VoIP) services, MyNetFone will be actively expanding its product offerings to ensure it can participate in the substantial opportunities in the Enterprise and Government sectors.

As an accredited supplier within the GITC framework, MyNetFone will be able to deliver Government departments and agencies in Queensland its leading feature-rich voice and data services, including SIP Trunking, Virtual PBX, Internet and other related services and equipment. MyNetFone is also the only SIP Trunking provider in Australia officially certified to interoperate with Microsoft Lync.

"This accreditation with the Queensland Government is another great achievement for us it cements our credibility in the Enterprise and Government space and indicates a growing shift towards IP communications not only as an alternative to traditional services, but as the preferred choice. We are committed to this space and are actively pursuing similar opportunities with other state governments," says MyNetFone CEO, Rene Sugo.

## About Government Information Technology and Communications (GITC) Framework

The GITC is a legal framework that has been developed as a cooperative effort between
