## **ASX ANNOUNCEMENT**

### **First Round of Drilling Completed at Darvii Naruu Mongolia**

Sentosa Mining (ASX: SEO) is pleased to report that the RC drilling program at its Darvii Naruu Copper Gold Project in Govi-Altai province, western Mongolia is now complete. The directors are delighted with the progress of the program with a total of 18 holes drilled and an average of 67.3 meters per shift achieved.

In total 2020 meters was drilled in this first round of drilling that commenced on 24 October 2013 and concluded on 9 November 2013. Six individual anomalies were tested in this campaign. Samples from the drill holes are currently being transported to Ulaanbaatar in Mongolia where they will undergo geochemical analysis.

In addition a selection of 23 surface and RC drill chip samples from various locations are being transported back to Perth, Western Australia where they will undergo Petrology analysis. Petrology analysis is essential to enhance our understanding of the processes which are responsible for the various mineralisation styles observed at Darvii Naruu.

Notwithstanding any unforeseen delays it is anticipated that the analytical process should be completed by the end of November 2013, with results being available in early December 2013.

37 anomalies were identified by the recent airborne geophysics survey conducted over the north western sector of the 62,735.8 Hectare Project. Six targets comprising the Mushroom Reef, Mushroom East, Sulphide Creek, Phone Point, Anomaly 7 and Anomaly 13 prospects were tested.

Perth based Sentosa acquired a 100% interest in Darvii Naruu on 1 October 2013 and has since raised \$1.14 million in an over-subscribed issue (placement), primarily to fund its first drilling on the project.

For further information concerning Sentosa's exploration plans for the future please contact Nigel Gellard, Executive Chairman.

## **Competent Persons Statement**

The information in this report that relates to exploration data compiled by Mr Darryl Mapleson, who is a Fellow of the Australian Institute of Mining and Metallurgy. Mr Mapleson is a Principal Geologist and a full time employee of BM Geological Services Pty Ltd. Mr Mapleson has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a competent person as defined in the 2004 edition of the “Australasian Code for reporting of Exploration results, Mineral Resources and Ore Reserves”.

## **About Sentosa Mining**

Sentosa Mining Limited (ASX:SEO) is a Perth-based exploration company, focused on the Darvii Naruu Porphyry Copper Gold Project, located within the gold and copper rich South Gobi Arc. Since executing an agreement to acquire the Darvii-Naruu Project in April 2013 Sentosa has gathered and interpreted approximately 1,620 line kilometers of aeromagnetic and radiometric data focusing on the north western sector of the project. Sentosa has also commissioned an independent technical review of the geology and geochemistry of the project. As reported to the ASX on 10th September 2013, this work has confirmed the potential for large scale copper-gold, gold or nickel-copper gold PGE mineralised systems within the north Western sector of Darvii Naruu. Sentosa also has the Jaurdi Hills Gold Project on the Coolgardie Goldfield, Western Australia.
