Rubicon Resources wishes to advise that it will not exercise the Option to acquire the Balya West Exploration Licence in Turkey due to the project failing to meet prescribed exploration hurdles. Additionally, the current governmental delays and uncertainty with respect to mining access and title issues impacted on the Rubicon decision.

Since the commencement of the six month Option Period, Rubicon has conducted geological and alteration mapping, rock chip sampling, soil sampling, and an IP geophysical survey at Balya West. The work successfully defined a large hydrothermal alteration system confirming the prospectivity of the region (as reported in the September 2013 Quarterly Report); however the work failed to identify additional gold mineralisation to that already defined by licence holder Tümad Madencilik.

Several new silica-clay and pyrite altered zones were identified in the mapping with corresponding strong chargeability responses defined in the IP survey; however surface sampling showed them to be barren. This has downgraded the overall potential of the other deeper chargeability targets identified in the IP survey.

As a result the potential to host economic gold mineralisation within the licence area was reduced and payment of the US\$185,000 Option exercise payment to acquire the licence could not be justified.

A decision by the Turkish Government to freeze licence transfers in September 2013 coupled with delays in granting permission for drilling within forestry land and the inability to acquire new licences has also had an impact on our Turkish activities. Rubicon still feels that the Country has excellent potential for new discoveries of gold and base metal deposits and resolution of the ancillary issues mentioned above in the near future will realise new opportunities.

Rubicon will continue to review projects within Turkey as well as other prospective areas as opportunities arise. Rubicon's five non-managed Joint Ventures in Australia continue to give exposure to exploration success in the highly prospective areas of the Eastern Goldfields, the Musgraves (both in Western Australia) and the Mount Isa Block (Queensland).

In the meantime, the Company will focus on minimizing holding costs both in Turkey and Australia.
