Redflow Manufacturing Partnership with Flextronics

Redflow is pleased to announce the appointment of Flextronics as their manufacturing partner. Flextronics is one of the world's largest end-to-end supply chain solutions companies, with facilities in over 30 countries and annual revenues of nearly \$25 billion.

This appointment has been made after an extensive request for information and proposal process resulting in over 10 shortlisted expressions of interest being received. This process was completed in conjunction with Zebulon Solutions, a company specializing in taking a design from initial engineering into mass production manufacturing who will continue assisting Redflow during the transition process.

"The Redflow ZBM battery will be the first flow battery globally to enter large scale production and several are currently being integrated into prototype energy storage systems with large system integrators," said Stuart Smith, CEO of Redflow. "Flextronics has a strong focus on energy infrastructure and a proven track record of successful product introductions for energy solution OEMs. This agreement will allow the ramp up of volume production to meet targeted sales over the next 12 months, and will see the Redflow ZBM module being manufactured by a significant global manufacturer with a history of manufacturing excellence. The corresponding improvements in manufacturing quality, consistency, scalability and reliability are all important attributes for customers in addition to cost efficiencies. "

Yours faithfully
