Activity Report for the Quarter Ended 31 December 2013

OVERVIEW

BURBANKS PROJECT - WA (Barra 100%*)

- First instalment of \$250,000 received from sale of Birthday Gift Mine.
- ❖ Blue Tiger Mines Pty Ltd recommenced mining at the Birthday Gift Mine in November.
- Three dimensional modelling continued for the quarter.

PHILLIPS FIND PROJECT - WA (Barra 100%**)

- Phillips Find Mining Centre remains in temporary care and maintenance pending improvement in the gold price.
- Three dimensional modelling continued for the quarter.

MT THIRSTY PROJECT – WA (Barra 50% / Conico Ltd (ASX:CNJ) 50%)

Nickel Sulphide Exploration

There was no nickel sulphide exploration activity for the quarter.

Cobalt-Nickel Oxide Deposit

There was no activity related to the Cobalt-Nickel Oxide Deposit for the quarter.

- * M15/161 is owned by Blue Tiger Mines Pty Ltd. Barra has 100% exploration and mining rights to Reservation Area within M15/161 only (refer Tenement Listing and Map)
- ** Except for tenements P16/2422-2425 which are 85% Barra, 15% Phoenix Gold Ltd (refer Tenement Listing)

1. BURBANKS PROJECT (WA) (100% Barra*)

* Excludes Birthday Gift Mine Area (Figure A1)

The Burbanks Project is centred 9km southeast of Coolgardie, Western Australia. The project includes the Burbanks Mining Centre where over 400,000ozs of gold has been produced from recent and historical open pit and underground mining operations since 1885. The project encompasses over 5km of strike extent of the Burbanks Shear Zone.

In August 2013, Barra sold the Birthday Gift Underground Mine (Birthday Gift) to Blue Tiger Mines Pty Ltd for cash and a \$25 per ounce royalty (after the first 6,000ozs production). The deal, which affects mining lease M15/161 only, saw the creation of a Reservation Area, whereby Barra retained 100% exploration and mining rights to the Reservation Area within M15/161 (Figure A1). All other tenements within the Burbanks Project are unaffected by the Birthday Gift Sale Agreement.

Birthday Gift Mine (BTM 100%, Barra Royalty Only)

Blue Tiger Mines Pty Ltd (BTM) recommenced mining at Birthday Gift in early November 2013. There has been no operational update received from BTM as yet.

The first cash instalment of \$250,000 was received during the period.

Exploration

A site visit was conducted with a contract resource geologist as part of the resource modelling program.

Detailed mapping and target generation is an ongoing program and continued during the period.

2. PHILLIPS FIND PROJECT (WA) (100% Barra*)

The Phillips Find Project is centred some 50km northnortheast of Coolgardie, Western Australia. The project encompasses the Phillips Find Mining Centre (PFMC) where 28,360ozs of gold has been mined from three open-pit operations; Bacchus Gift, Newhaven and Newminster, since 1998.

The most recent mining activity at the PFMC was in January 2013 where Barra, through an alliance with Blue Tiger Mining Pty Ltd, mined 53,986 tonnes of ore to produce 4,331 ounces of gold (refer to ASX announcement 29th April 2013: "Phillips Find Production Update" available to view at www.barraresources.com.au).

The Company continues to work on extracting further value from project by growing and developing the underground potential at the PFMC.

Mining

Phillips Find Mining Centre (PFMC)

There was no mining activity at the PFMC for the period.

The PFMC is currently in care and maintenance pending an improvement in the gold price.

Exploration

A site visit was conducted with a contract resource geologist as part of the three dimensional (3D) modelling program.

3D geological modelling continued at the PFMC and for several advanced prospects within the Phillips Find Project. The aim of this process is to develop 3D models to assist with generating and testing of targets at depth.

Detailed mapping and target generation is an ongoing program and continued during the period.

3. MT THIRSTY PROJECT (50% Barra; 50% Conico – *Joint Venture*)

The Mt Thirsty Project is centred 20km north-northwest of Norseman, Western Australia. Barra owns 50% of the project in joint venture with Conico Ltd (ASX:CNJ). Conico is the joint venture manager.

The Mt Thirsty Project contains the Mt Thirsty Cobalt-Nickel (Co-Ni) Oxide Deposit which has the potential to emerge as a significant cobalt supplier. Recent metallurgical test work has indicated high recoveries of cobalt (Co) together with some nickel (Ni) can be achieved through low temperature agitated leaching in closed tanks using sulphur dioxide (SO₂).

The Mt Thirsty Co-Ni Oxide Deposit contains an Indicated Mineral Resource of 16.6Mt @ 0.14% Co, 0.60% Ni and 0.98% Mn and an Inferred Mineral Resource of 15.3Mt @ 0.11% Co, 0.51% Ni and 0.73% Mn over a length of 1.6km and a width of up to 850m (The Mt Thirsty Co-Ni Oxide Deposit mineral resource was prepared and first reported in accordance with the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported; refer to ASX announcement 8th March 2011: "Resource Upgrade Mt Thirsty Cobalt-Nickel Deposit"1, Oxide available to view www.barraresources.com.au).

As well as the Co-Ni Oxide Deposit, the Mt Thirsty Project also hosts primary nickel sulphide mineralisation. Intersections of nickel sulphide (Ni-S) mineralisation up to 6m down-hole @ 3.5% Ni were made by the joint venture in 2010 (refer to ASX announcement 19th May 2010: "High Grade Nickel Sulphides Intersected at Mt Thirsty JV" 1, available to view at www.barraresources.com.au).

¹ The Company is not aware of any new information or data that materially affects the information included in the previous announcement and that all of the previous assumptions and technical parameters underpinning the estimates in the previous announcement have not materially changed.

Nickel Sulphide Exploration

There was no nickel sulphide exploration activity during the period.

Mt Thirsty Cobalt-Nickel (Co-Ni) Oxide Deposit

There was no work conducted on the Mt Thirsty Co-Ni Oxide Deposit for the period.

4. RIVERINA NICKEL PROJECT (30% Barra, 70% Riverina Resources Pty Ltd – *Joint Venture, Nickel Rights Only*)

The Riverina Project is centred 125km north of Coolgardie, Western Australia. Barra owns 30% of the nickel rights in joint venture with Riverina Resources Pty Ltd. Riverina is the joint venture manager.

Between 2005 and 2008, the Joint Venture actively explored the Martins Zone ultramafic unit for economic concentrations of nickel laterite and nickel sulphide mineralisation.

Exploration intersected narrow widths of high-grade remobilised massive nickel sulphide adjacent to an undeformed ultramafic footwall contact. Results included a high grade intersection of 0.37m down-hole @ 10.88% Ni from 215m down-hole (refer to ASX announcement 7th July 2005: "High Grade Massive Nickel Sulphides Intersected at Riverina" 1, available to view at www.barraresources.com.au).

There was no nickel exploration activity undertaken by the joint venture during the quarter.

Expenditure requirements for the tenements are required to be met by Swan Gold Mining Limited (formerly Monarch Gold Limited) who acquired the gold rights in mid-2007.

TENEMENTS

The following tenement changes occurred during the quarter (see Tenement Listing at end of report):

- P63/1749 expired.
- E63/1113 surrendered.

Disclaimer

The interpretations and conclusions reached in this report are based on current geological theory and the best evidence available to the authors at the time of writing. It is the nature of all scientific conclusions that they are founded on an assessment of probabilities and, however high these probabilities might be, they make no claim for complete certainty. Any economic decisions that might be taken on the basis of interpretations or conclusions contained in this report will therefore carry an element of risk.

It should not be assumed that the reported Exploration Results will result, with further exploration, in the definition of a Mineral Resource.

Competent Persons Statement

The information in this report which relates to Exploration Results is based on information compiled by Mr Gary Harvey who is a Member of the Australian Institute of Geoscientists and a full-time employee of Barra Resources Ltd. Mr Harvey has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (the JORC Code). Mr Harvey consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
