31 DECEMBER 2013

QUARTERLY ACTIVITIES REPORT

HIGHLIGHTS

- Soil geochemical analyses completed for the Riesling Prospect indicate encouraging high order copper, lead and zinc anomalies, which further enhance the potential of the project.
- Aboriginal cultural heritage survey has been completed which approves a new follow up drill program at Riesling.

Summary

Superior Resources Limited (SPQ) is a Brisbane based ASX listed mineral explorer whose principle aim is the discovery of a large base metal deposit in northern Queensland. Superior holds a number of exploration projects in northwest Queensland for large Mount Isa type copper and lead-zinc-silver deposits and exploration projects in northeast Queensland for copper-gold-lead-zinc-silver deposits. Superior also holds gold, phosphate and uranium tenements.

Project Locations

EXPLORATION OVERVIEW

Attention was again focused on the Greenvale Project during the quarter to progress the One Mile, Cockie Creek and Riesling Prospects to drilling in the 2014 year. Further analyses of soil samples were completed to better understand the Riesling Central area and to assist drill targeting. Native title clearances have now been completed for the Riesling, Cockie Creek and One Mile prospects. Discussions are underway to establish landholder agreements for all prospects which are now necessary before drilling is undertaken.

No significant work was completed on the northwest Queensland tenements during the quarter.

SPQ's current tenement position, in northeast and northwest Queensland, is shown in Figures 1 and 2 respectively.

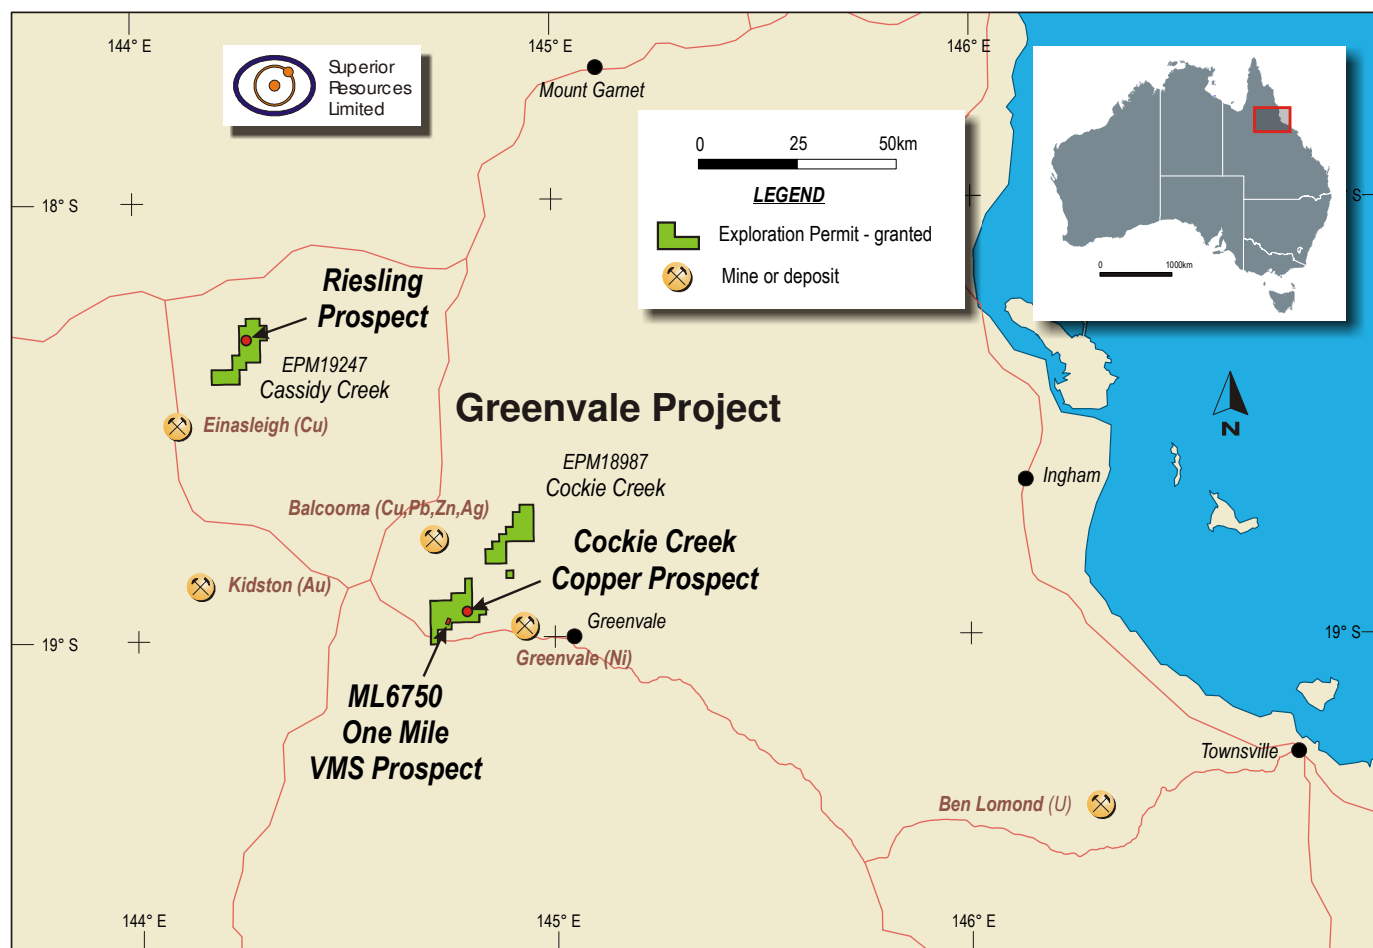

Figure 1. Superior Resources Limited – Greenvale Project location northeast Queensland.

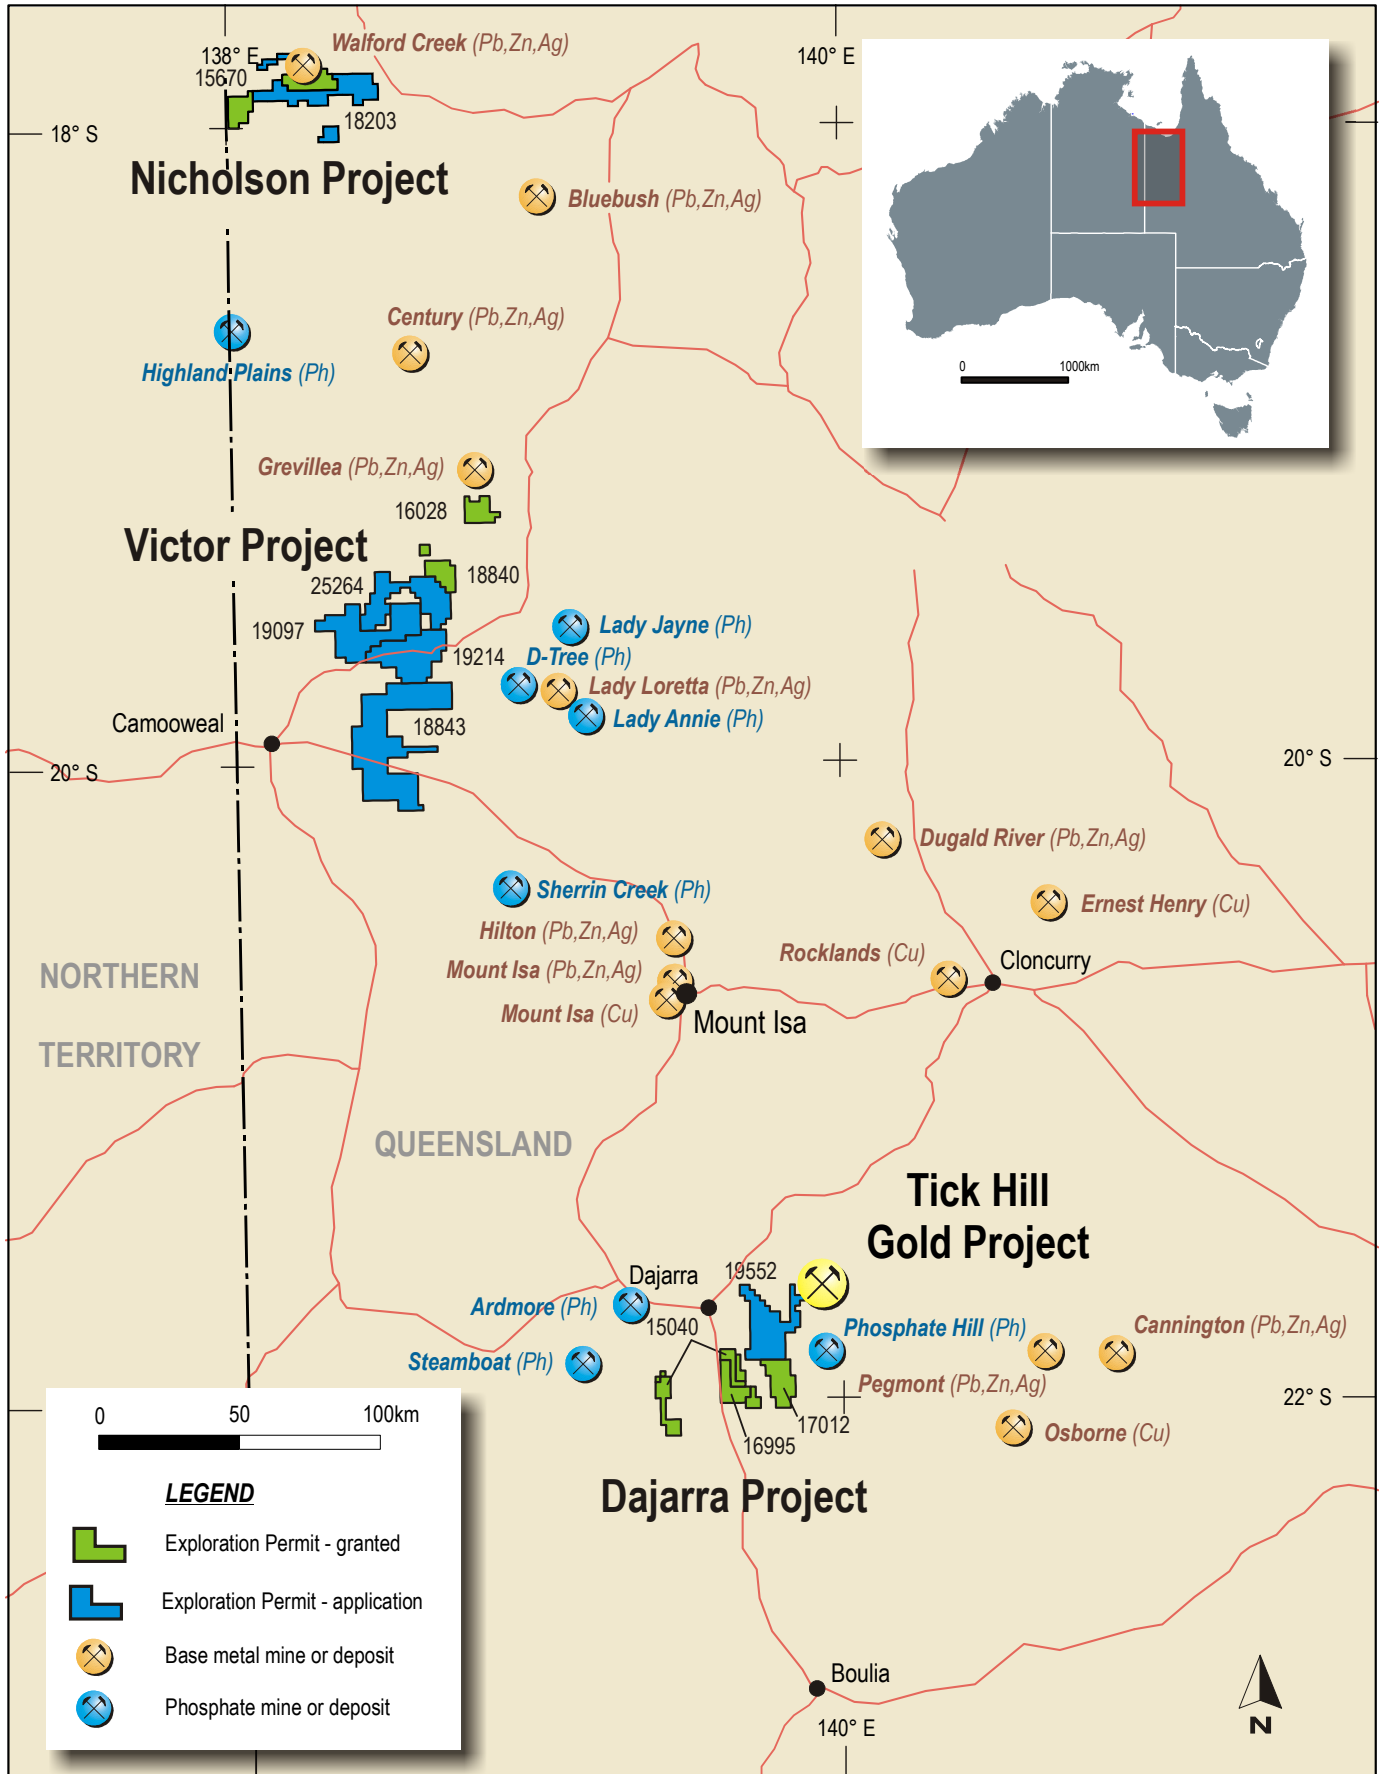

Figure 2. Superior Resources Limited - Northwest Queensland project locations.

EXPLORATION ACTIVITIES

Greenvale Project – Northeast Queensland

The Greenvale Project now comprises two granted exploration permits (EPMs 18987 “Cockie Creek” and 19247 “Cassidy Creek”) and one mining lease (ML6750 “One Mile”). The project includes the One Mile VMS Prospect, the Cockie Creek Copper Prospect and the Riesling VMS Prospect. More recent work has been on the central portion of the Riesling Prospect where high order copper, lead and zinc anomalies have resulted from soil sampling of the prospect area and geological mapping has indicated potential for volcanogenic massive sulphide (VMS) type mineralization.

During the December quarter, in addition to further analyses of soil samples, Aboriginal cultural heritage clearances have been completed in respect of the proposed drill sites at the Riesling Prospect. In addition, discussions have been held with the landholder to establish a landholder access agreement over the prospect site to enable drilling to proceed.

Aboriginal cultural heritage clearances have also been completed over the Cockie Creek Copper Prospect and the area surrounding the One Mile Prospect and efforts to establish landholder agreements over EPM 18987 are in progress.

EPM19247 “Cassidy Creek” (Burgundy, Riesling and Chablis Prospects)

As reported in the September Quarter, soil samples which had previously been assayed by a hand-held XRF (X-ray Fluorescence) analyzer (Niton Portable XRF Analyser) were submitted to ALS Chemex (ALS) for additional analyses using the ICP (Inductively Coupled Plasma) method. Preparation for the ICP analyses requires dissolution using acids which do not recover the elements in acid insoluble forms. This includes zinc which is held within gahnite (zinc spinel, $ZnAl_2O_4$).

The results from the ICP analyses provide further support for targeting of the central part of the Riesling Prospect area which has been highlighted by previous work.

Figures 3 and 4 show the imaged ICP results for copper, lead, zinc, silver, bismuth, molybdenum, iron and a ratio of the XRF zinc results to the ICP zinc results.

Copper and lead ICP results are similar to the previous XRF results as might be expected. The ICP results for silver, bismuth and iron all show anomalies in the centre of the Riesling Prospect giving support to the copper, lead and zinc results. The ICP results for molybdenum also show up the centre of the Riesling Prospect but the anomaly tends to extend to the north along the soil copper anomaly.

The ICP results for zinc show lower (but still strongly anomalous) values than the XRF zinc results in the centre of the Riesling Prospect. This is best indicated in the final image in Figure 4 which shows an image of the ratio of the XRF zinc results to the ICP zinc results. The higher XRF zinc results reflect a higher proportion of the zinc occurring within gahnite.

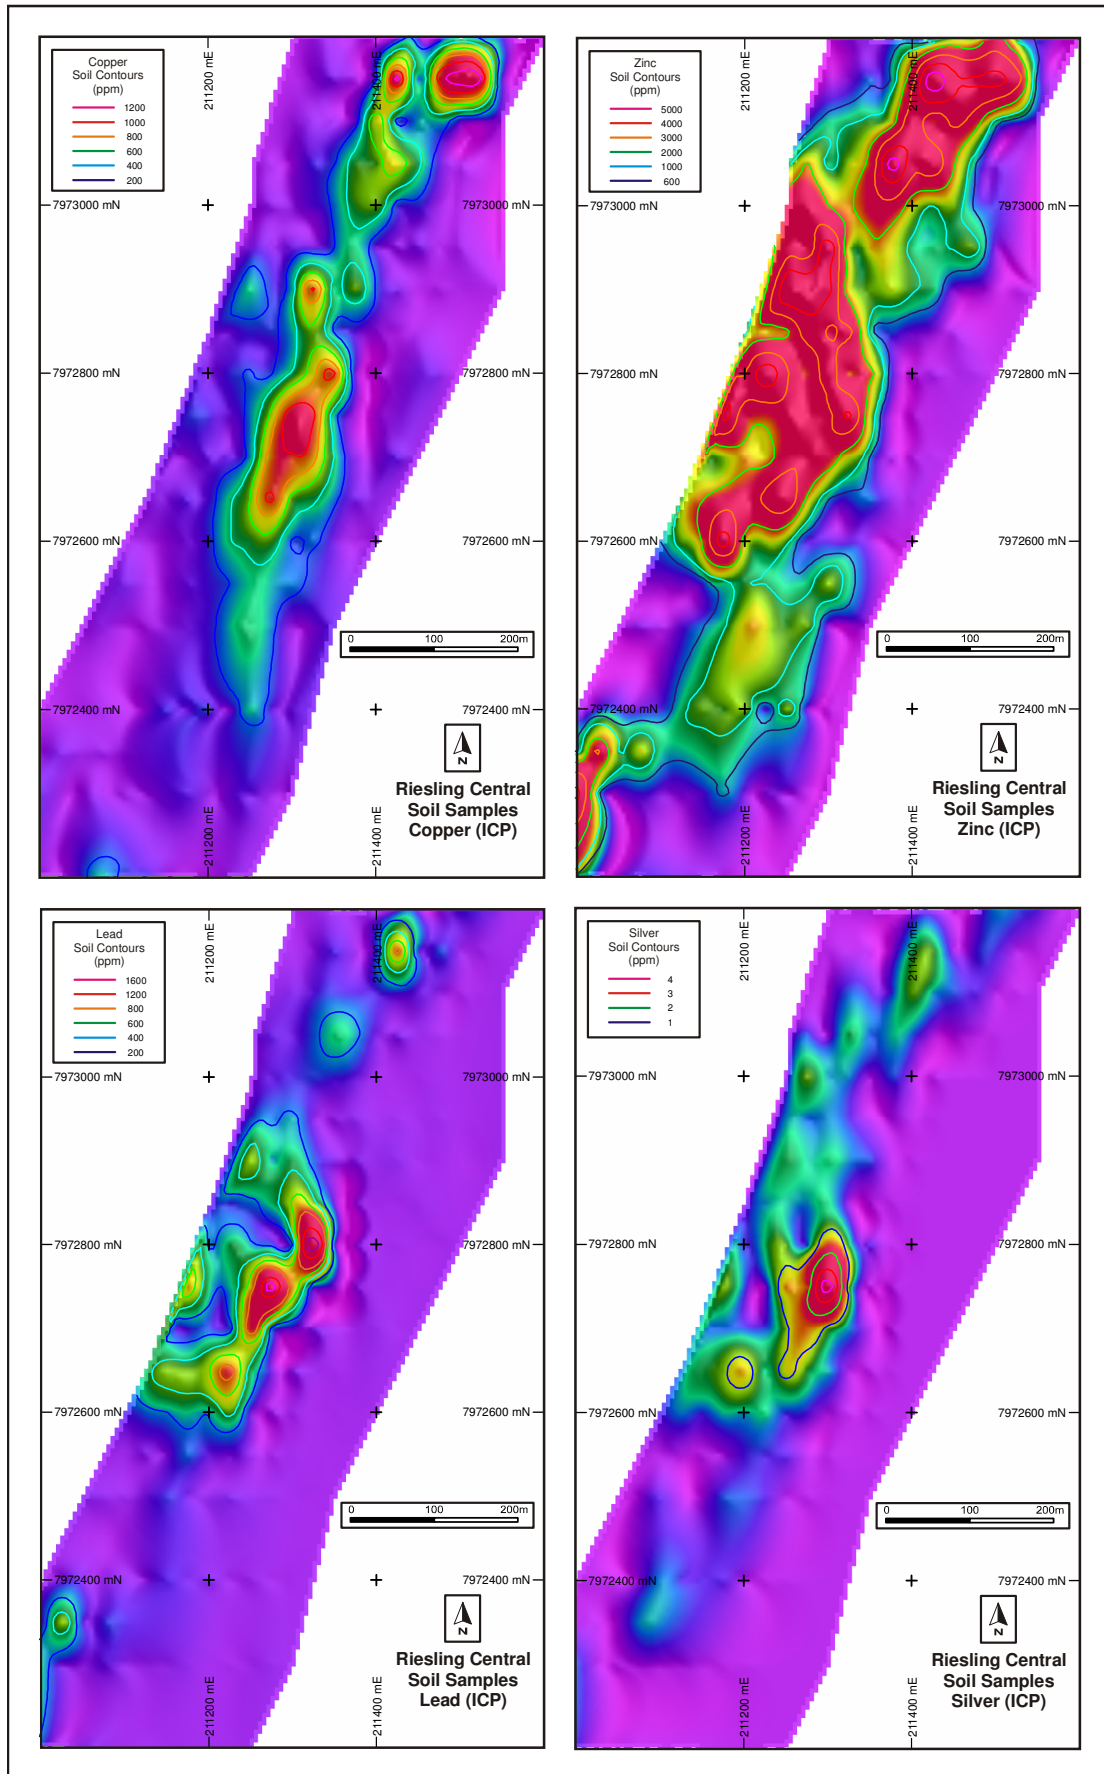

Figure 3. Riesling Central – Imaged soil sample ICP assay results for copper, zinc, lead and silver.

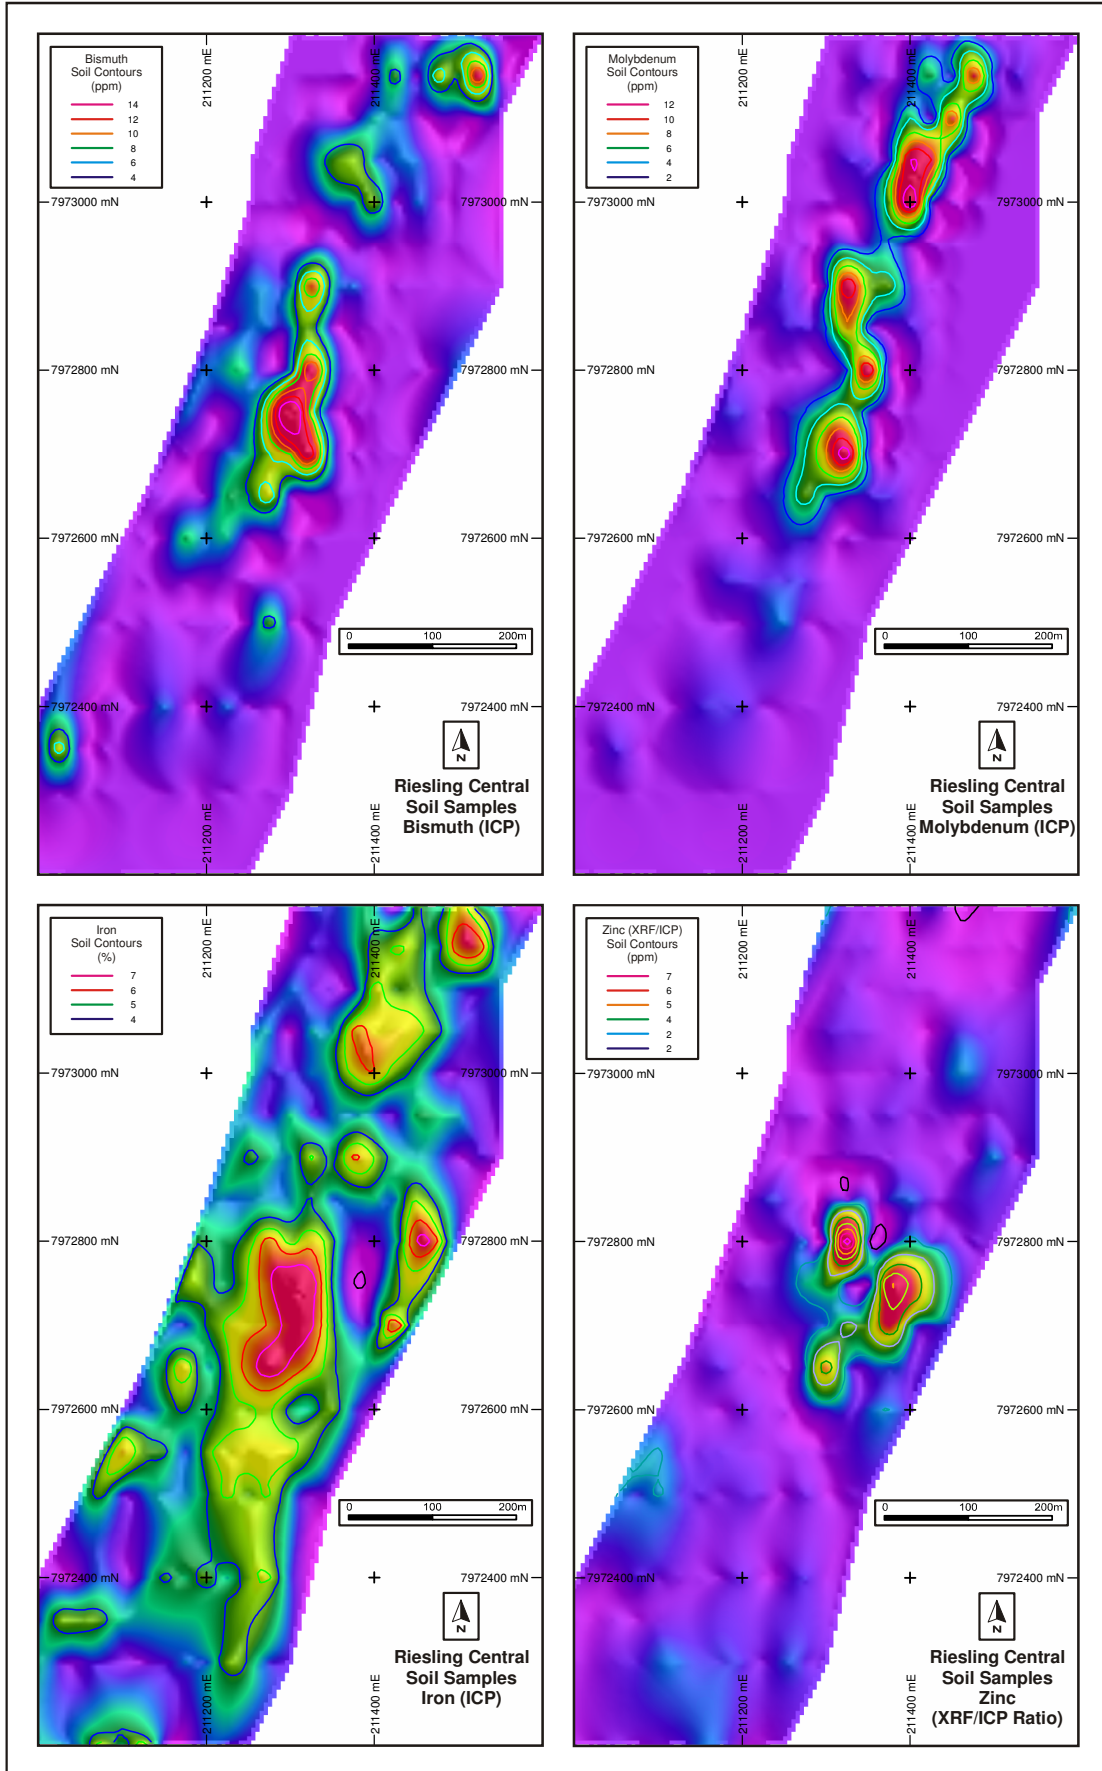

Figure 4. Riesling Central – Imaged soil sample ICP assay results for bismuth, molybdenum and iron and an image of the ratio of XRF assay results to ICP assay results for zinc.

CORPORATE SUMMARY

The Company has focused most of its resources during the quarter on identifying and engaging with a number of third parties in relation to new project opportunities as well as potential joint venture arrangements in relation to the large North West Queensland Projects. The current corporate focus is a part of a broader strategy to position the Company with strong copper, base metal and gold assets during this period of depressed markets.

Whilst the Company continues to further define the copper mineralisation and encouraging targets at the Greenvale Project, it will do so by cost effective means.

INVESTMENTS

SPQ maintains an exposure in relation to ASX listed uranium focused company, Deep Yellow Limited (ASX:DYL). At 31 December 2013, the company holds 7,000,000 DYL shares with a closing value of \$126,000.

A handwritten signature in black ink, appearing to read 'Peter Hwang'.

Peter Hwang
Managing Director

The information in this report that relates to Mineral Resources and Exploration Results is based on information compiled by Mr Ken Harvey, a full-time employee and shareholder of Superior Resources Limited, who is a Member of the Australian Institute of Geoscientists. Mr Harvey has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Harvey consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

Appendix 1

Riesling Soil Sampling, 2013 JORC Code, 2012 Edition – Table 1

Section 1 – Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information. 	<ul style="list-style-type: none"> Standard -80# sieved soil samples (approximately 50g) collected from hand-dug holes to approximately 20cm depth at the reported site to provide a regular coverage of the prospect area. While samples are taken at a specific site, geochemical dispersion usually makes the sample representative of a larger area except for elements that are largely insoluble in the weathering zone (e.g. lead).
Drilling techniques	<ul style="list-style-type: none"> Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> Not applicable

Criteria	JORC Code explanation	Commentary
<i>Drill sample recovery</i>	<ul style="list-style-type: none"> • <i>Method of recording and assessing core and chip sample recoveries and results assessed.</i> • <i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i> • <i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i> 	<ul style="list-style-type: none"> • Not applicable
<i>Logging</i>	<ul style="list-style-type: none"> • <i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i> • <i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i> • <i>The total length and percentage of the relevant intersections logged.</i> 	<ul style="list-style-type: none"> • Not applicable
<i>Sub-sampling techniques and sample preparation</i>	<ul style="list-style-type: none"> • <i>If core, whether cut or sawn and whether quarter, half or all core taken.</i> • <i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i> • <i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i> • <i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i> • <i>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</i> • <i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i> 	<ul style="list-style-type: none"> • Not applicable
<i>Quality of assay data and</i>	<ul style="list-style-type: none"> • <i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered</i> 	<ul style="list-style-type: none"> • Assaying by both ICP (ALS) and XRF (hand-held - but desktop mounted) methods to provide acid soluble and total elements respectively. Results indicate that considerable zinc is held in an

Criteria	JORC Code explanation	Commentary
<i>laboratory tests</i>	<p><i>partial or total.</i></p> <ul style="list-style-type: none"> • <i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i> • <i>Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.</i> 	<p>insoluble phase (gahnite) in the central part of the prospect area as reported in the quarterly report.</p> <ul style="list-style-type: none"> • Standard/duplicate samples were included to monitor results.
<i>Verification of sampling and assaying</i>	<ul style="list-style-type: none"> • <i>The verification of significant intersections by either independent or alternative company personnel.</i> • <i>The use of twinned holes.</i> • <i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i> • <i>Discuss any adjustment to assay data.</i> 	<ul style="list-style-type: none"> • Analysed by two methods (ICP and XRF) to determine acid soluble component.
<i>Location of data points</i>	<ul style="list-style-type: none"> • <i>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</i> • <i>Specification of the grid system used.</i> • <i>Quality and adequacy of topographic control.</i> 	<ul style="list-style-type: none"> • Hand-held GPS (Zone 55 MGA).
<i>Data spacing and distribution</i>	<ul style="list-style-type: none"> • <i>Data spacing for reporting of Exploration Results.</i> • <i>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i> • <i>Whether sample compositing has been applied.</i> 	<ul style="list-style-type: none"> • Samples at 25m spacing on lines at 50m intervals.
<i>Orientation of data in relation to geological</i>	<ul style="list-style-type: none"> • <i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i> • <i>If the relationship between the drilling orientation and the orientation</i> 	<ul style="list-style-type: none"> • Not applicable

	<p><i>likely market windows for the product.</i></p> <ul style="list-style-type: none">• <i>Price and volume forecasts and the basis for these forecasts.</i>• <i>For industrial minerals the customer specification, testing and acceptance requirements prior to a supply contract.</i>	
Economic	<ul style="list-style-type: none">• <i>The inputs to the economic analysis to produce the net present value (NPV) in the study, the source and confidence of these economic inputs including estimated inflation, discount rate, etc.</i>• <i>NPV ranges and sensitivity to variations in the significant assumptions and inputs.</i>	<ul style="list-style-type: none">• Not applicable
Social	<ul style="list-style-type: none">• <i>The status of agreements with key stakeholders and matters leading to social licence to operate.</i>	<ul style="list-style-type: none">• Not applicable
Other	<ul style="list-style-type: none">• <i>To the extent relevant, the impact of the following on the project and/or on the estimation and classification of the Ore Reserves:</i>• <i>Any identified material naturally occurring risks.</i>• <i>The status of material legal agreements and marketing arrangements.</i>• <i>The status of governmental agreements and approvals critical to the viability of the project, such as mineral tenement status, and government and statutory approvals. There must be reasonable grounds to expect that all necessary Government approvals will be received within the timeframes anticipated in the Pre-Feasibility or Feasibility study. Highlight and discuss the materiality of any unresolved matter that is dependent on a third party on which extraction of the reserve is contingent.</i>	<ul style="list-style-type: none">• Not applicable
Classification	<ul style="list-style-type: none">• <i>The basis for the classification of the Ore Reserves into varying confidence categories.</i>• <i>Whether the result appropriately reflects the Competent Person's view of the deposit.</i>• <i>The proportion of Probable Ore Reserves that have been derived from Measured Mineral Resources (if any).</i>	<ul style="list-style-type: none">• Not applicable

Criteria	JORC Code explanation	Commentary
<i>Audits or reviews</i>	<ul style="list-style-type: none"> <i>The results of any audits or reviews of Ore Reserve estimates.</i> 	<ul style="list-style-type: none"> Not applicable
<i>Discussion of relative accuracy/confidence</i>	<ul style="list-style-type: none"> <i>Where appropriate a statement of the relative accuracy and confidence level in the Ore Reserve estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the reserve within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors which could affect the relative accuracy and confidence of the estimate.</i> <i>The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.</i> <i>Accuracy and confidence discussions should extend to specific discussions of any applied Modifying Factors that may have a material impact on Ore Reserve viability, or for which there are remaining areas of uncertainty at the current study stage.</i> <i>It is recognised that this may not be possible or appropriate in all circumstances. These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.</i> 	<ul style="list-style-type: none"> Not applicable

Section 5 – Estimation and Reporting of Diamonds and Other Gemstones

(Criteria listed in other relevant sections also apply to this section. Additional guidelines are available in the ‘Guidelines for the Reporting of Diamond Exploration Results’ issued by the Diamond Exploration Best Practices Committee established by the Canadian Institute of Mining, Metallurgy and Petroleum.)

Criteria	JORC Code explanation	Commentary
<i>Indicator minerals</i>	<ul style="list-style-type: none"> <i>Reports of indicator minerals, such as chemically/physically distinctive garnet, ilmenite, chrome spinel and chrome diopside,</i> 	<ul style="list-style-type: none"> Not applicable

Criteria	JORC Code explanation	Commentary
	<i>should be prepared by a suitably qualified laboratory.</i>	
Source of diamonds	<ul style="list-style-type: none"> • Details of the form, shape, size and colour of the diamonds and the nature of the source of diamonds (primary or secondary) including the rock type and geological environment. 	<ul style="list-style-type: none"> • Not applicable
Sample collection	<ul style="list-style-type: none"> • Type of sample, whether outcrop, boulders, drill core, reverse circulation drill cuttings, gravel, stream sediment or soil, and purpose (eg large diameter drilling to establish stones per unit of volume or bulk samples to establish stone size distribution). • Sample size, distribution and representivity. 	<ul style="list-style-type: none"> • Not applicable
Sample treatment	<ul style="list-style-type: none"> • Type of facility, treatment rate, and accreditation. • Sample size reduction. Bottom screen size, top screen size and re-crush. • Processes (dense media separation, grease, X-ray, hand-sorting, etc). • Process efficiency, tailings auditing and granulometry. • Laboratory used, type of process for micro diamonds and accreditation. 	<ul style="list-style-type: none"> • Not applicable
Carat	<ul style="list-style-type: none"> • One fifth (0.2) of a gram (often defined as a metric carat or MC). 	<ul style="list-style-type: none"> • Not applicable
Sample grade	<ul style="list-style-type: none"> • Sample grade in this section of Table 1 is used in the context of carats per units of mass, area or volume. • The sample grade above the specified lower cut-off sieve size should be reported as carats per dry metric tonne and/or carats per 100 dry metric tonnes. For alluvial deposits, sample grades quoted in carats per square metre or carats per cubic metre are acceptable if accompanied by a volume to weight basis for calculation. • In addition to general requirements to assess volume and density there is a need to relate stone frequency (stones per cubic metre or tonne) to stone size (carats per stone) to derive sample grade (carats per tonne). 	<ul style="list-style-type: none"> • Not applicable

Criteria	JORC Code explanation	Commentary
<p><i>Reporting of Exploration Results</i></p>	<ul style="list-style-type: none"> • <i>Complete set of sieve data using a standard progression of sieve sizes per facies. Bulk sampling results, global sample grade per facies. Spatial structure analysis and grade distribution. Stone size and number distribution. Sample head feed and tailings particle granulometry.</i> • <i>Sample density determination.</i> • <i>Per cent concentrate and undersize per sample.</i> • <i>Sample grade with change in bottom cut-off screen size.</i> • <i>Adjustments made to size distribution for sample plant performance and performance on a commercial scale.</i> • <i>If appropriate or employed, geostatistical techniques applied to model stone size, distribution or frequency from size distribution of exploration diamond samples.</i> • <i>The weight of diamonds may only be omitted from the report when the diamonds are considered too small to be of commercial significance. This lower cut-off size should be stated.</i> 	<ul style="list-style-type: none"> • Not applicable
<p><i>Grade estimation for reporting Mineral Resources and Ore Reserves</i></p>	<ul style="list-style-type: none"> • <i>Description of the sample type and the spatial arrangement of drilling or sampling designed for grade estimation.</i> • <i>The sample crush size and its relationship to that achievable in a commercial treatment plant.</i> • <i>Total number of diamonds greater than the specified and reported lower cut-off sieve size.</i> • <i>Total weight of diamonds greater than the specified and reported lower cut-off sieve size.</i> • <i>The sample grade above the specified lower cut-off sieve size.</i> 	<ul style="list-style-type: none"> • Not applicable
<p><i>Value estimation</i></p>	<ul style="list-style-type: none"> • <i>Valuations should not be reported for samples of diamonds processed using total liberation method, which is commonly used for processing exploration samples.</i> • <i>To the extent that such information is not deemed commercially</i> 	<ul style="list-style-type: none"> • Not applicable

Criteria	JORC Code explanation	Commentary
	<p><i>sensitive, Public Reports should include:</i></p> <ul style="list-style-type: none"> ○ <i>diamonds quantities by appropriate screen size per facies or depth.</i> ○ <i>details of parcel valued.</i> ○ <i>number of stones, carats, lower size cut-off per facies or depth.</i> ● <i>The average \$/carat and \$/tonne value at the selected bottom cut-off should be reported in US Dollars. The value per carat is of critical importance in demonstrating project value.</i> ● <i>The basis for the price (e.g. dealer buying price, dealer selling price, etc).</i> ● <i>An assessment of diamond breakage.</i> 	
<p>Security and integrity</p>	<ul style="list-style-type: none"> ● <i>Accredited process audit.</i> ● <i>Whether samples were sealed after excavation.</i> ● <i>Valuer location, escort, delivery, cleaning losses, reconciliation with recorded sample carats and number of stones.</i> ● <i>Core samples washed prior to treatment for micro diamonds.</i> ● <i>Audit samples treated at alternative facility.</i> ● <i>Results of tailings checks.</i> ● <i>Recovery of tracer monitors used in sampling and treatment.</i> ● <i>Geophysical (logged) density and particle density.</i> ● <i>Cross validation of sample weights, wet and dry, with hole volume and density, moisture factor.</i> 	<ul style="list-style-type: none"> ● Not applicable
<p>Classification</p>	<ul style="list-style-type: none"> ● <i>In addition to general requirements to assess volume and density there is a need to relate stone frequency (stones per cubic metre or tonne) to stone size (carats per stone) to derive grade (carats per tonne). The elements of uncertainty in these estimates should be considered, and classification developed accordingly.</i> 	<ul style="list-style-type: none"> ● Not applicable

Appendix 2

DISCLOSURES REQUIRED UNDER ASX LISTING RULE 5.3.3

- Mining tenements held at the end of the quarter and their location

State	Tenement Name	Tenement ID	Location	Interest	Holder	Comments
QLD	Suliaman Creek	EPM15040	Dajarra	100%	SPQ	Granted
QLD	Little Suliaman	EPM16995	Dajarra	100%	SPQ	Granted
QLD	Wills Creek	EPM17012	Dajarra	100%	SPQ	Granted
QLD	Turpentine Creek	EPM(A)25264	Dajarra	100%	SPQ	Application
QLD	Hedleys 2	EPM15670	Nicholson	100%	SPQ	Granted
QLD	Hedleys South	EPM(A)18203	Nicholson	100%	SPQ	Application
QLD	Victor Creek	EPM16028	Victor	100%	SPQ	Granted
QLD	Harris Creek	EPM18840	Victor	100%	SPQ	Granted
QLD	Wooroona Creek	EPM(A)18843	Victor	100%	SPQ	Application
QLD	Tots Creek	EPM(A)19097	Victor	100%	SPQ	Application
QLD	Scrubby Creek	EPM(A)19214	Victor	100%	SPQ	Application
QLD	Tomahawk Creek	EPM(A)25264	Victor	100%	SPQ	Application
QLD	Cockie Creek	EPM18987	Greenvale	100%	SPQ	Granted
QLD	Cassidy Creek	EPM19247	Greenvale	100%	SPQ	Granted
QLD	One Mile	ML6750	Greenvale	100%	SPQ	Granted

- Mining tenements acquired and disposed of during the quarter and their location

NIL

- Beneficial percentage interests held in farm-in or farm-out agreements at end of the quarter

State	Project Name	Agreement Type	Parties	Interest held at end of quarter by exploration entity or child entity	Comments
QLD	Wills Creek	Farm-out Agreement	SPQ and DiamonEx Limited	100%	Announced Apr 2013
QLD	Tick Hill Gold Project	Farm-in Agreement	SPQ and Diatrema Resources Limited	0%	Announced Aug 2011, subject to pre-conditions relating to pre-existing option and sale agreement between DRX and MIM

- Beneficial percentage interests in farm-in or farm-out agreements acquired or disposed of during the quarter

Not Applicable this quarter

Applicable this quarter – see table below:

State	Project Name	Agreement Type	Parties	Interest held at end of quarter by exploration entity or child entity	Comments
