

ASX/MEDIA RELEASE

13th May 2014

SIBS[®] brakes launched for trailer market

Advanced Braking Technology Ltd (ASX:ABV) is pleased to announce that it has been assigned an Australian licensing approval number for the installation of **SIBS[®]** wet brake technology onto trailers used in the heavy truck market. ABT expects final approval and documentation to be issued shortly. ABT has invested considerably over the last 5 years in the development, validation and product launch of a **SIBS[®]** brake suitable for use in the waste trucks.

The major components of the **SIBS[®]** waste truck brake have been used to create a complimentary product to address the brake wear issues seen in the road train market. The first of these simplified brakes is currently being prepared for operation in the Pilbara region of WA in a fuel tanker fleet. The extensive development and validation that has already been completed on the **SIBS[®]** waste truck brake has resulted in a greatly reduced effort required to commercialise the trailer brake. This simplified trailer brake opens up a significantly larger market, with over 7000 trailers being produced each year in the Australian market.
