CURRENT PROJECTS

Napoleonville

- Dugas & Leblanc #3
- Hensarling #1
- Templet #1

Bowtie West

- Sugar Valley #1

Notes:

- (1) The SRH #1 and #2 wells were on production but only producing from the Wolfcamp intervals as the Spraberry Dean intervals, the most productive in vertical wells, were not frac'd primarily due to funding constraints.

The SRH #1 & SRH #4 wells, and the SRH #2 & SRH #3 wells produced to separate tank batteries. A tank battery is where the produced oil and water are collected, and when 2 or more wells are produced to a tank battery, the hydrocarbon production is comingled and therefore not attributable to any particular well. The hydrocarbon production has been split based on the number of frac stages completed for each of the 2 wells on each respective battery. This reporting method is consistent with how production figures are reported to the Texas Railroad Commission and the Texas Scottish Rite Hospital.

- (2) These figures represent GGP's 15% working interest share of oil and dry gas production.
(3) These figures represent GGP's 3.99% working interest share of oil production.
(4) These figures represent GGP's 12% working interest share of oil and dry gas production.
