

QUARTERLY ACTIVITIES STATEMENT

For the quarter ended 31 March 2015

HIGHLIGHTS

- **Clinker Hill Project exploration**
 - **1,476 meters of RC drilling completed**
 - **Awaiting results**
 - **New leases added to the east**
 - **Co-Funded Drill Program / Exploration Incentive Scheme (EIS)**
 - **Two applications submitted;**
 - **4 diamond holes at Bulloo Downs to test emissivity anomalies; and**
 - **1 deep diamond hole at Glandore testing four mineralised zones**
 - **Corporate**
 - **Cash of \$760,000 (as at 31 March 2015)**
 - **R&D Tax Concession Claim - \$442,642 (after costs), received 2 April 2015**
-

Aruma Resources Limited (ASX: AAJ), an active Western Australian gold and copper explorer, has completed a first pass RC drill program at its Clinker Hill Project, 40km east of Kalgoorlie in the quarter. It also successfully applied for the Research and Development (R & D) tax concession received at the beginning of the current quarter.

Drilling at Clinker Hill

A total of 11 holes for 1,476m were drilled. The program investigated the strong >50ppb gold in soil anomaly which coincides with several dry blowing areas. The anomaly is continuous over >1,600m of strike and between 150 to 250m wide.

The results are yet to be received but the wide intersections of sulphide rich quartz carbonates are highly encouraging and two new leases have been pegged to the east of the tenement. This ground will allow for the continuity of the NE-SW trending structure to be investigated and tested.

Bulloo Downs

An application for a co-funded drilling program under the Exploration Incentive Scheme (EIS) has been submitted for four deep diamond drill holes at Bulloo Downs, 100 kilometres south of Newman in the Pilbara region. This drilling proposal would test Tier 1 anomalies in the prospective Bangemall Formation in the Bulloo and Neds Gap structural corridors. These targets (4 first order and 10 second order) are based on HyMap hydrothermal structures and emissivity heat flow. Targets with high tenor gossans have drill intersections of 4m at 2.2% Cu; 3m at 1.3% copper from 79m; 2m at 4.1% and 1m at 8% from 20m; and 2m at 1.7% copper from 79m.

The four holes planned to 750m would be drilled vertical to minimise deflection and target a depth of economically extractable deposits similar in size and grade to the Nifty copper mine (60Mt at 2% Cu).

Location and Scale

The Pilbara of Western Australia has the potential to make up the forecast world copper shortfall in global copper supply in the next decade. The Pilbara Copper Province has fertile geology, proven copper endowment, proximity to markets and government and indigenous parties' enthusiasm for mining. The Province covers some 150,000km² and the copper deposits are situated in the NE section (Yeneena) and the central area (Capricorn) of the Proterozoic basins. The Bulloo Project covers some 2% of the Province and demonstrates good copper fertility.

Aruma Resources Limited

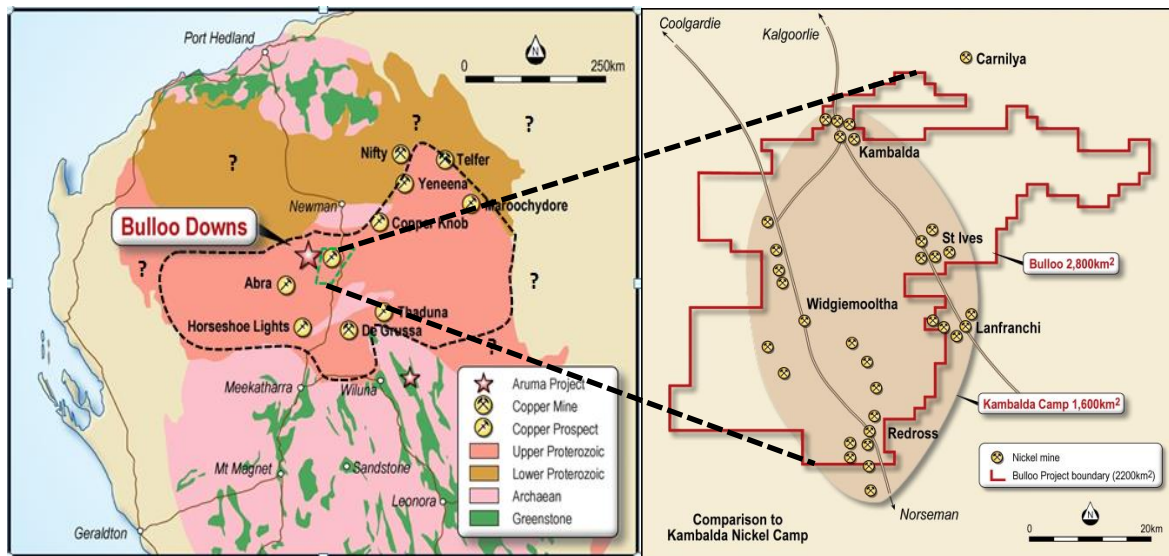

Figure 2 Bulloo Downs Project location in the Pilbara Gascoyne Province and its comparison in size to the Kambalda-Norseman Nickel Province

The Bulloo Copper project is larger than the Kambalda to Norseman nickel camp in Western Australia and covers an area equal to some 30% of the renowned and comparable Zambian Copper belt. With combined resources of over 3.5Mt the Pilbara-Gascoyne is a significant and recently identified metal province with many new discoveries such as Bulloo having the ability to become mines.

Glandore

An EIS application has been submitted for a single deep diamond drill hole at the Glandore project, near Kalgoorlie in the WA goldfields. The proposed deep diamond drill hole is designed to test four parallel structural mineralised trends (Supergene, Axial Planar, Eastern and Johnston trends) of the known mineralised structural positions on the eastern limb of the Glandore anticline. Two of these trends, the Eastern and Johnston trends, have not been drill tested at depth before.

The Axial planar Lode is a typical Archean gold mineralisation system with type sections being in the Joe Lord Core Library in Kalgoorlie.

The aim of the drilling is to:

- resolve the stratigraphic units (which are covered by recent lake sediments) to the east of the outcropping lithologies of the Glandore anticline;
- understand the structural relationship of the main geological units along the Majestic structure;
- test the Supergene, Axial Planar, Eastern and Johnston near surface anomalies at depth; and
- test fluid flow modelling targets.

Projects Summary

EASTERN GOLDFIELDS	Glandore Hub	<ul style="list-style-type: none"> ▪ Glandore Gold Project - 40km east of Kalgoorlie-Boulder ▪ Possible further drilling to investigate anomalous zones ▪ EIS submitted for deep drilling under lodes
		<ul style="list-style-type: none"> ▪ Clinker Hill Gold Lease - 35km east of Kalgoorlie-Boulder ▪ 1,476 of RC drilling completed ▪ Quartz carbonate sulphides intersected ▪ Additional leases pegged to the east to cover possible extensions ▪ Assays in May
	Regional Projects	<ul style="list-style-type: none"> ▪ Jundee South Gold Project - 20km south of Jundee Mine ▪ JV discussions underway
		<ul style="list-style-type: none"> ▪ Bulloo Downs Copper Project – 100km south of Newman ▪ EIS application submitted for 3,000m of diamond drilling ▪ Proposal for drilling six emissivity targets

Table 1 Project Status and Activity Table

Proposed Exploration Activities for Q4 FY2014-15

Aruma's lease holdings are constantly being appraised and currently total approximately 3,000km².

All of Aruma's projects have strong metal indicators and proven high grade potential. The ongoing work comprises:

- **Bulloo Downs Copper Project** – Lease consolidation and planning diamond drilling (subject to funding availability)
- **Glandore** – Project appraisal and planning diamond drilling (subject to funding availability)
- **Glandore Hub – Clinker Hill** – Data interpretation upon return of results
- **Jundee South** - JV discussions

The Company received an R&D tax refund of \$442,000 after costs on the 2 April 2015. This, together with cash of \$0.76M at 31 March 2015 ensures that Aruma is funded for the coming exploration year. The Company is considering joint venture partners on all projects due to the scale and scope of work required.

Aruma will also be appraising leases that are becoming available in the Wiluna-Kalgoorlie terrain, especially where adjacent to current projects or with resources or intersections.

In addition to its current projects in Western Australia, Aruma continues to evaluate other potential project opportunities.

Competent Person's Statement

The information in this release that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Peter Schwann who is a Fellow of the Australasian Institute of Mining and Metallurgy. Mr Schwann is a full time employee of the Company. Mr Schwann has sufficient relevant experience to qualify as a Competent Person as defined in the JORC Code (2012) and consents to the inclusion of this information in the form and context in which it appears. All exploration results reported have previously been released to ASX and are available to be viewed on the Company website www.arumaresources.com.au. The Company confirms it is not aware of any new information that materially affects the information included in the original announcement. The Company confirms that the form and context in which the Competent Person's findings are present have not been materially modified from the original announcements.
