Melbourne, 9 December 2015

Dallas Fort Worth Airport Selects Adacel for Airport Driver Simulators

Adacel Technologies Limited (**Adacel** or the **Company**) is pleased to announce that it has been selected by the Dallas Fort Worth International Airport (**DFW**) to upgrade DFW's driver training simulator systems. Initial contract value is expected to be up to A\$450,000. DFW has been at the forefront of simulation training and this contract comes ahead of anticipated Federal Aviation Administration legislation that will recommend the use of simulation training for operators of all vehicles in airport environments.

The existing DFW systems will be upgraded to Adacel's newly released "AeroDRIVE" driving simulator platform and will enable DFW to expand its FAA Part 139 flight line driver training program. The new systems include a site specific 3D visual database depicting both the DFW airport as well as the landside environment.

Adacel's Chairman, Peter Landos, said, "it is very gratifying that Dallas Fort Worth has again selected Adacel to provide the primary systems for its extensive and successful driver training program".

The Company's AeroDRIVE platform is a comprehensive simulator specifically designed to train vehicle operators to safely drive in an airport environment. The AeroDRIVE simulator includes a suite of tools that enable instructors to define their own training curriculum and modify key elements of the 3D environment. Optional modules are available to train for specific airport driving applications such as Airport Rescue and Fire Fighting.
