Attention: Company Announcement Officer

BigAir (ASX:BGL) Appoints new Chairman

In a planned transition, existing BigAir Chairman Paul Tyler will retire from the Board of Directors at the end of July 2016 and will be succeeded as Chairman by existing long standing non-executive Director Vivian Stewart.

Mr Tyler will hand over to Mr Stewart in the coming weeks, allowing a smooth transition.

The Board of Directors would like to extend its sincere thanks to Paul Tyler for his dedication and valuable stewardship of the company in performing the role of Chairman and Director since September 2008.

Mr Tyler commented on the transition "Being a part of the BigAir story during a period of such rapid growth has been exciting. Whilst personally it is time for me to move on to new challenges I do so safe in the knowledge that I leave BigAir in the extremely capable hands of Vivian and Jason along with the other Board members and executives. I look forward to watching the BigAir group momentum continue well into the future."

Mr Stewart paid tribute to Mr Tyler's leadership of BigAir. "Over the past 8 years that Paul has been Chairman of BigAir, the Company has grown considerably, both in terms of operations and in returns to shareholders. Since 2008, BigAir has acquired a number of complementary companies and successfully established itself in new & strategically important market segments of community broadband and cloud managed services. The Company has delivered revenue, earnings and dividend growth, year on year, through some turbulent periods both for the telco industry and the financial markets. Despite Paul's demanding leadership duties as head of Nokia's Networks Business in Asia Pacific, he was able to add value to management and the Board consistently. He has been instrumental in supporting the executive team to strengthen the positive culture of the company."

Jason Ashton, CEO of BigAir Group said "I would like to personally thank Paul for his guidance and support and to wish him the very best in the future and I am confident the future of our company is in good hands with the transition to Vivian as Chair.

Mr Stewart has been a BigAir Director since June 2008, is Chairman of the Nomination and Remuneration Committee and a member of the Audit and Risk Committee.

About BigAir Group Limited

BigAir owns and operates Australia's largest metropolitan fixed wireless broadband network for business. The Australian business market comprises nearly one million businesses and BigAir's network provides near blanket coverage across its largest cities including Sydney, Melbourne, Brisbane, Perth, Adelaide, Newcastle, Gold Coast, Sunshine Coast and Darwin, with further rollout currently underway. BigAir provides data solutions through its Channel partners that include Tier 1 and Tier 2 carriers and IT service companies and also through its own Corporate solutions team that can design and manage large corporate communication networks.

The BigAir Unified Communications division provides customers with innovative, fully integrated Cloud, Managed Services and Unified communications solutions, designed to satisfy business requirements by delivering reliable, feature rich, business grade services that are backed by industry leading service and support.

The BigAir Community Broadband division is the leading provider of outsourced managed Internet services in the tertiary student accommodation market within Australia, with network infrastructure at more than 160 sites nationally, servicing large common areas and approximately 35,000 beds. BigAir is able to provide a complete end to end solution for student accommodation providers including both wireless and wired infrastructure delivering high speed broadband along with its advanced billing systems and 24/7 operational support systems. The Community Broadband division also supplies managed communications and WiFi solutions into Retirement Living villages, Shopping Centres, local councils and remote mining camps.

BigAir's competitive infrastructure advantage includes its state-of-the-art carrier-grade fixed wireless network which allows installation of dependable symmetric broadband services at speeds up to and beyond 1000Mbps with installation taking as little as a few hours. The fixed wireless network is also available in combination with traditional fixed line infrastructure such as fibre to provide critical network and application infrastructure with complete technology and carrier diversity.
