Borobon Prospect

An Inferred Mineral Resource estimate of 2.7Mt @ 1.3g/t gold for 112,000ozs gold (top cut 20g/t gold and lower cut-off of 0.5g/t gold applied) at the Borobon has been announced for the prospect.

During the Quarter, exploration activity consisted of field visits by Taruga staff to undertake geological review of the Kossa-Borobon trend, review artisanal mining activities to evaluate geological control on mineralisation and to review targets for additional drilling.

Kossa Project

The Company is continuing to review the Kossa area that consists of four concessions- Kossa 1, Kossa 2, Ouanzerbie and Kouriki. The total area under licence is now over 1,100km² (Figure 1). Widespread gold anomalism has been indicated in geochemical sampling completed by Taruga and previous explorers. In the regional exploration, sampling has been very wide and a process of geological and geophysical interpretation is being completed to assist in ranking areas for further geochemical sampling to define potential drill targets.
