Quarterly Activities Report For The Period Ending 31 December 2016

Highlights for the quarter ending 31 December 2016

- At the Norseman Gold Project a high level technical review was recommended last reporting period. Accent has completed a high level Scope of Work for submission(s) to several key external consultants and results are pending. Heritage Agreement and Mining Lease Agreement (renewal) negotiations are progressing for M63/657 application.
- At the Meekatharra Gold Project a total of 41 exploration targets for orogenic gold were identified and ranked by Southern Geoscience Consultants. A preliminary evaluation and re-prioritization of SGC identified targets commenced during the quarter.
- At Magnetite Range an environmental rehabilitation review took place during Q3 2016. A logistics study for sample relocation was completed and is currently underway.
- The Company continues to concentrate on the identification of investment opportunities in the resources sector. During the quarter confidentiality agreements were signed with two mineral producers in South Australia and due diligence was undertaken in conjunction with external consultants in Australia and China. Due to limited remaining reserves and other technical issues ACS did not proceed with an investment. The Company continues to focus on investment opportunities in the resources sector and is targeting projects which are generating or will generate positive cashflow.

Corporate

In conjunction with majority shareholder Xingang Resources (HK) Limited and Rich Mark Development the Company continues to assess investment opportunities and projects for acquisition or development.

MZI Resources NL (ACS 4.8%)

The Company announced on 30th November 2015 that it had acquired a substantial shareholding in MZI Resources NL ("MZI") which is a listed West Australian mineral sands producer (ASX Code: MZI). MZI carried out a \$43million share placement in 3 Tranches, the first 2 of which the Company participated in. The Company acquired 10m shares or 6.25% of MZI at an issue price of 40 cents for a total consideration of \$4.0 million. The third Tranche of MZI placement which took place in late February 2016, following MZI shareholder approval, diluted the Company's interest to 4.8%.

The Company funded its participation in the MZI placement by way of a \$4million loan facility extended by the Company's major shareholder Xingang Resources (HK) Ltd.

In November 2015 MZI commissioned a mineral sands mine at Keysbrook which is 70kms south of Perth. During 2016 the project has been ramping up to its initial production target of 96ktpa of leuconite (L70 and L88) and zircon concentrate comprising 38ktpa of L88, 29ktpa of L70, and 29ktpa of zircon concentrate. It has contracted sales of 70% of initial output. At current mineral sands prices the initial production rate is expected to generate revenue in excess of \$60mpa.

In October 2016 MZI announced that the Keysbrook project had achieved a positive operating cash flow of \$7.5m in the September 2016 quarter despite not having achieved design production levels at the Keysbrook wet concentrator plant (WCP) and the Picton mineral separation plant (MSP).

In December 2016 MZI announced that the WCP at Keysbrook had achieved design recovery levels and that this should lead to improved performance at the MSP at Picton when the next processing campaign takes place in February 2017.

During the December quarter MZI also announced a Board and Management transition with Mr Rod Baxter becoming the new Chairman and Mr Steve Ward being appointed as interim Managing Director. At the same time it also advised that a US\$16m debt funding package had been provided by the major shareholder Resource Capital Fund VI LP. The funding package will be for the expenditure on plant optimisation and working capital and expansion studies.

Keysbrook is shaping up as a high value, low cost operation and is expected to be the world's largest primary producer of leucoxene. With resources equivalent to 30 years mine life at initial production rates it has significant expansion potential. The Keysbrook project has mineral resources totaling 155m.t. at 2.0% heavy mineral content and within these resources Proved and Probable Reserves are 72.1 mt at 2.2% heavy mineral grade. The reserves are sufficient for 15 years at the initial production rate.

Magnetite Range Iron Ore Project (ACS 100%)

The Company's wholly owned Magnetite Range Project ('MRP') is located in the Midwest region of Western Australia, immediately adjacent to the Extension Hill iron ore mine, and contains a total JORC resource of **434.5 Mt at 31.4% Fe** at 15% weight recovery **cut off**, as announced to the ASX on 28 November 2012.

Project studies at the MRP have been deferred, the Company remains committed to development of the project and continue to review land access, infrastructure and corporate options.

An environmental review has commenced for the Magnetite Range Iron Project. Planning and preparation is currently underway to relocate archive samples to one area resulting in a more secure and appropriate long term location and to reduce potential for compromised sample quality.

Norseman Gold Project (ACS 100%)

The Norseman Gold Project occurs within a strongly mineralised portion of the southern Norseman-Wiluna greenstone belt and is located 5km south of Norseman.

A JORC 2004 Code Mineral Resource for Iron Duke and Surprise deposits of **1,039,400 tonnes @ 1.8 g/t Au for 59,500 ounces** (99 percentile upper cut, 1.0 g/t Au lower cut off) was announced to the ASX on 26 November 2012. Over 70-80% of the resource is shallow, within 50m of surface. The 2012 review and resource estimation exercise clearly demonstrated that additional drilling is required to test deeper potential and newly identified zones, a technical review of the previous resource and geological interpretation is ongoing and a technical review on site made within this quarter. Discussions with external consultants have progressed; a high level 'health check' and review of the current resource is recommended and potential Jorc 2012 update on the resource during the 2017 reporting period.

Mining Lease application (M63/657) applied for on 3 September 2015 is pending with the WA Department of Mines and Petroleum. This application seeks to convert 7 contiguous granted Prospecting Licences and 5 contiguous granted Mining Leases into one consolidated Mining Lease (M63/657). The 12 tenements are P63/1380-1381; P63/1383-1384; P63/1642; P63/1893; P63/1904; M63/225-226; M63/229; M63/247 and M63/369.

P63/2052 was pegged and application submitted on 20th June 2016 and is pending, an objection (490522) on P63/2052 was registered on 13 July 2016 and is pending. Heritage and Mining Lease Agreement negotiations are progressing for M63/657.

A formal proposal by a third party to alluvial mine a portion of the existing Iron Duke deposit and Lady Mary alluvials was received 19/10/2016, this proposal was rejected by the board during the reporting period. A field trip was conducted to the project early December to complete a third in line pegging application for the same area as P63/2052 (June 2016). This 3rd in line application P63/2074 was submitted on 14th December 2016 and was in response to objection 490522 registered on 13th July 2016. Application P63/2074 is pending.

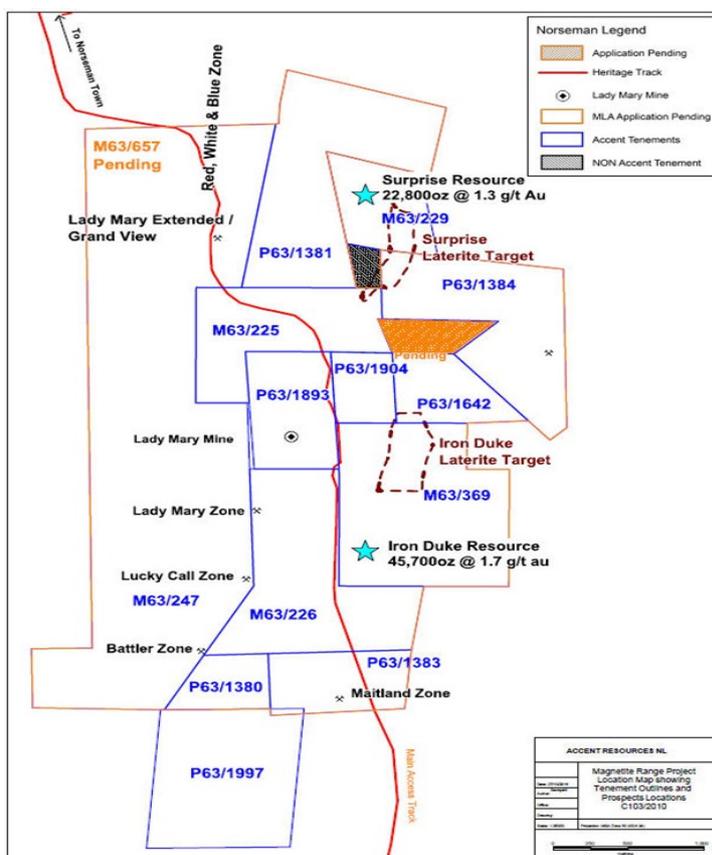

Figure 1 Norseman Project Location Map

Arcadia Gold Project - Meekatharra (ACS 100%)

The Arcadia- Meekatharra gold project (E51/1209) is located in the southern portion of the Abbots greenstone belt some 45km south west of Meekatharra and 30km south west of Bluebird gold mine (Metals X) in the Murchison district of Western Australia.

The project is an early stage exploration project with historical exploration confined to limited historical drilling at the Hope River Prospect. The Hope River Prospect was previously identified by WMC Resources air core reconnaissance drilling in the 1990's and is located on a N-S trending western auriferous quartz dolerite. The quartz dolerite trends over approximately 2km length located within the N-S trending Hope River shear zone which splays off the Abernathy Shear Zone. Historical significant intersections include:

- 8m @ 4.24 g/t Au (MHD 46 on cross section 7023950mN)
- 8m @ 3.89 g/t Au (MHC 21 on cross section 7023235mN)
- 1m @ 15.5 g/t Au (MHC 13 on cross section 7024435mN)

The northern strike extension of the Hope River Prospect was drilled with aircore (AC) during 2012 by Accent Resources and returned anomalous composite assay results (peak 8m @ 1.2 g/t Au) over more than 1km. Reverse Circulation (RC) follow up drilling was recommended but never completed.

Previous work on the tenement includes drilling, soil surveys, geological mapping and historical geophysical surveys over parts of the tenement. Due to the lack of subsurface information and a high proportion of salt lake cover, gravity and aerial magnetic surveys were completed during 2016 to help define geological architecture and preliminary local scale target definition.

Southern Geoscience Consultants 'SGC' completed processing and interpretation of the geophysical data on 19th September 2016. A total of 41 potential areas of interest for orogenic gold were identified and ranked, based on a combination of empirical evidence, conceptual ideas, analogous and / or unusual magnetic responses, interpreted structural settings and historical mapping. Preliminary review of this data and report are encouraging, evaluation of targets generated by this report is currently underway and will help highlight any key opportunities further progressing the Meekatharra gold project. (Refer Fig 2).

Competent Persons Statement

The information in this report that relates to Exploration Results, Mineral Resource and Ore Reserves is based on information compiled by Ms George Morton, a Competent Person who is a Member of the Australian Institute of Geoscientists. Ms Morton is a full time employee of Accent Resources NL. Ms Morton has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Ms Morton consents to the inclusion in the report of the matters based on her information in the form and context in which it appears.
